Education

Swarnim Institute of Technology

Gandhinagar, Gujarat, India

B. Tech Computer Science and Engineering

September 2022 – May 2026

About

Final year Computer Science student with a strong command of core engineering principles—**algorithms, data structures, operating systems, and system design**. Over **3+ years** of professional experience, I've designed and delivered production-grade full-stack systems, including real-time admin panels, AI-driven recommendation engines, and scalable microservice architectures. My approach combines analytical rigor with hands-on execution, consistently optimizing performance, enhancing system reliability, and translating complex requirements into clean, maintainable code. Driven by a deep curiosity for technology, I thrive at the intersection of theory and practice—building solutions that scale efficiently and deliver measurable business impact.

Skills Summary

Technical Skills: JavaScript (JS), TypeScript (TS), React.js, Next.js, React Native, Node.js, MongoDB, SQL, Firebase, Docker, Figma, Postman, Jira, GitHub, Discord Bot, PHP, Laravel, Python, C/C++, Rest APIs

Functional Skills: Core / Team Management, Project Coordination, Time Optimization, System & Server Management, Problem-Solving, Decision-Making Under Pressure, Strategic Thinking

Experience

Web Developer, Ac doctor-Indore

September 2024 – current

- Currently developing and maintaining a comprehensive admin panel for an AC services company, enabling seamless management of bookings, technician onboarding, customer data, services, offers, and rewards
- Collaborating with cross-functional teams to optimize internal operations, automate workflows, and enhance the overall efficiency of both technician and customer-facing applications.

Mern Stack Developer, Phixman-New Delhi

October 2022 – March 2024

- Developed and managed a centralized admin panel for an electronics service company, handling end-to-end operations such as service requests, technician allocation, customer management, and promotional offers.
- Contributed to the improvement of both technician and customer app workflows by integrating real-time tracking, service categorization, and efficient backend processes.

Projects & Freelance

Gym Studio

- Developed an admin app managing subscriptions, workout playlists, diets, attendance, and gym customer interaction, integrating LED screen video streaming for in-gym use.

Top-notch (Broker Connect App)

- Created a broker networking platform offering profile management, property listing, secure messaging, and admin tools to enhance deal collaboration and verification in real estate.

Beautic – Comprehensive Next-Gen Beauty Ecosystem

- Architected and developed Beautic, a full-stack beauty services platform encompassing customer, partner, admin, and backend systems; featuring end-to-end service bookings, B2B business management, AI virtual assistant for beauty guidance, and scalable integrations modelled on leading service platforms like Zomato and Rapido.
